Patina (PA)

Patina is a highly breathable natural "old-look" plaster, naturally bacteriostatic and fungistatic, available in the 10 Warm Collection colours.

Patina is hand made by skilled decorators, and any distinctive marks and irregularities in the surface are proof of its refined and exclusive nature.

Patina is indicated for internal surfaces (walls); for all environments in the house, with the exception of shower cubicles and around kitchen units, and for all commercial areas, with the exception of showers interiors.

Patina gives environments an "old-look" style with great personality, creating a sense of unfinished and imperfect, that clothes the walls with charm and attraction. It simulates the effect of passing time that, by building up a characteristic patina, attenuates the original colours, adding unexpected shading or allowing underlying layers to shine through.

The texture of Patina, which is soft to the touch and extremely beautiful, features ripples, marbling and vibrations in the material that are the fruit of imperfections typical of hand-crafted products.
